

EKSAMENSdokument WEBUTVIKLING EKSAMEN 2024

Ambisjonsnivå

Denne eksamen satser jeg på C-B krav. Oppgaven er noe mer omfattende enn i fjor og jeg ønsker ikke å ta meg vann over hodet, derfor peiler jeg meg inn på C-B da jeg fikk B på skriftlig. Grunnen til at jeg peiler meg inn her er fordi jeg liker godt å leke med flexbox, grid osv men jeg ser at kravene for A blir for omfattende.

Antakelser og tolkninger:

I E kravene står det uten feil, og jeg vurderer det dermed slik at dette betyr ingen errors, men at warnings er lov slik som i fjor. Jeg tolker det også som at mange av kravene for størrelse på bilder (px) som er i kravene E-C kan forandres på om man sikter oppover i karakterskalaen.

Det var nytt med tilgjengelighetserklæringer for meg i år og jeg antar at det skal linkes til PDF fil som ligger i prosjektet mitt og ikke UU sine nettsider.

Prompt:

PROMPT:

make a scroll with scroll-snap type

ChatGPT sa:

ChatGPT

Here's a complete example of a scrollable container using scroll-snap-type. This creates a horizontally scrollable section with snapping functionality for smooth and user-friendly navigation.

Code Example:

html

Kopier kode

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <meta charset="UTF-8">
```

```
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
```

```
  <title>Scroll Snap Example</title>
```

```
<style>
```

```
  body {
```

```
    font-family: Arial, sans-serif;
```

```
    margin: 0;
```

```
    padding: 0;
```

```
    background-color: #f9f9f9;
```

```
    display: flex;
```

```
    justify-content: center;
```

```
    align-items: center;
```

```
    height: 100vh;
```

```
  }
```

```
  .scroll-container {
```

```
width: 80vw;
height: 300px;
display: flex;
gap: 20px;
overflow-x: auto;
scroll-snap-type: x mandatory; /* Enable horizontal snapping */
scrollbar-width: thin; /* For modern browsers, makes scrollbar less intrusive */
}
```

```
.scroll-container::-webkit-scrollbar {
  height: 8px;
}
```

```
.scroll-container::-webkit-scrollbar-thumb {
  background: #888;
  border-radius: 4px;
}
```

```
.scroll-container::-webkit-scrollbar-track {
  background: #f0f0f0;
}
```

```
.card {
  flex: 0 0 80%; /* Each card takes 80% of the container width */
  height: 100%;
  scroll-snap-align: start; /* Align the start of the card with the container */
  background: #ffffff;
  border: 1px solid #ddd;
```

```
border-radius: 10px;
box-shadow: 0 4px 8px rgba(0, 0, 0, 0.1);
display: flex;
justify-content: center;
align-items: center;
font-size: 1.5rem;
color: #555;
text-align: center;
padding: 20px;
}
</style>
</head>
<body>
<div class="scroll-container">
  <div class="card">Card 1</div>
  <div class="card">Card 2</div>
  <div class="card">Card 3</div>
  <div class="card">Card 4</div>
  <div class="card">Card 5</div>
</div>
</body>
</html>
```

Features of This Scrollable Snap Container:

1. **scroll-snap-type: x mandatory;;**

- Ensures that scrolling happens horizontally and snaps to the nearest child element.

2. **scroll-snap-align: start;;**

- Aligns the start of each child element with the container's start position when snapping.

3. Responsive Layout:

- The cards (.card) are styled to take 80% of the container's width, with gap: 20px for spacing between them.

4. Scrollbar Styling:

- For browsers supporting ::-webkit-scrollbar, the scrollbar is styled to be minimal and visually appealing.

How It Works:

- Users can scroll horizontally through the container.
- The content will "snap" to align each card neatly with the start of the container.
- This works seamlessly on both desktop and touch devices.

Result:

This approach creates a visually clean and functional horizontal scrollable area with snapping for better usability. It's perfect for carousels, galleries, or any horizontally scrolling content.

PROMPT

make a easy drop down pick size form where it says "pick a size" inside the grey form box

ChatGPT sa:

ChatGPT

Here's a simple HTML form with a dropdown menu where it says "Pick a size" inside the grey form box:

html

Kopier kode

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
  <meta charset="UTF-8">
```

```
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
```

```
  <title>Pick a Size Form</title>
```

```
  <style>
```

```
body{
  font-family: Arial, sans-serif;
  padding: 20px;
}
.form-container{
  width: 300px;
  padding: 10px;
}
select{
  width: 100%;
  padding: 10px;
  font-size: 16px;
  border: 1px solid #ccc;
  border-radius: 4px;
  background-color: #f1f1f1;
  color: #333;
}
select:focus{
  outline: none;
  border-color: #007bff;
  background-color: #e9ecef;
}
</style>
</head>
<body>

<div class="form-container">
  <label for="size">Pick a size:</label>
  <select id="size" name="size">
    <option value="" disabled selected>Pick a size</option>
    <option value="small">Small</option>
```

```
        <option value="medium">Medium</option>
        <option value="large">Large</option>
    </select>
</div>

</body>
</html>
```

PROMPT

<details> <summary>Materiale og vedlikehold</summary> <p>bla</p> </details> i want to remove the default arrow down and instead have a + sign which indicates that i can press for more info

ChatGPT sa:

ChatGPT

To replace the default arrow of the <details> element with a custom + sign, you can use CSS to hide the default arrow and insert your own icon.

Here's how you can do it:

Updated HTML:

html

Kopier kode

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Custom Summary Icon</title>
    <link rel="stylesheet" href="styles.css">
</head>
<body>

    <details>
```

```
<summary>Materiale og vedlikehold</summary>
<p>bla</p>
</details>

</body>
</html>
```

CSS (styles.css):

css

Kopier kode

```
/* Remove default arrow */
```

```
summary {
    list-style: none; /* Removes the default bullet/arrow */
    cursor: pointer;
    position: relative;
    padding-left: 20px; /* Space for the custom icon */
}
```

```
/* Add custom "+" sign */
```

```
summary::before {
    content: "+"; /* The plus icon */
    position: absolute;
    left: 0;
    font-weight: bold;
    color: #333;
}
```

```
/* Change "+" to "-" when details is open */
```

```
details[open] summary::before {
    content: "-"; /* The minus icon */
}
```

Explanation:

1. Remove Default Arrow:

- The `list-style: none;` on the `<summary>` element removes the default arrow.

2. Custom Icon:

- The `summary::before` pseudo-element inserts a + before the summary text.
- `position: absolute;` ensures the custom icon appears at the start of the summary.
- `padding-left` on the summary ensures space for the custom icon.

3. Toggle Icon:

- The `details[open] summary::before` rule changes the + to – when the `<details>` element is expanded.

Result:

- The default arrow is replaced by a + icon, which changes to – when expanded. This provides a clear and customizable toggle indicator.
